1. Enhancements	2
1.1 Risk List Filter Behaviour Improved — Filters Now Work Consistently Across Paging/Scrolling.....	3
1.2 Notification Pagination Fixed — Pagination Now Uniform Across Dashboard & Notifications Page.....	3
Summary of Benefits	4

We are pleased to announce a number of improvements designed to enhance your experience with our platform. Below is a summary of the key updates:

1. Enhancements

1.1 Risk List Filter Behaviour Improved — Filters Now Work Consistently Across Paging/Scrolling

The filtering logic within the Risk List module has been corrected to ensure that filters apply consistently, even when users switch between paging and scrolling views. Previously, filtered results would reset or display incomplete data during navigation, making it difficult for users to review a refined list of risks.

Why This Matters:

Earlier, applying filters (such as Status, Category, or Owner) could lead to inconsistent output once users paged through results or switched to infinite scrolling. This caused confusion and made filtered data unreliable. With this update, the system now maintains accurate filtering regardless of how users navigate the list.

How to Navigate:

- Navigate to **Risk List**.
- Apply any filter (e.g., Status, Risk Category, Owner).
- Move between pages or scroll through the list.

1.2 Notification Pagination Fixed — Pagination Now Uniform Across Dashboard & Notifications Page

The pagination logic for Notifications has been unified across the Dashboard view and the Notifications page. This resolves an issue where the two interfaces displayed inconsistent pages or entry counts, causing users to miss notifications or see duplicate items.

Why This Matters:

Users previously experienced mismatched pagination behavior—clicking "Next" on the Dashboard could show different results from the Notifications page. This

created confusion and made it difficult to track unread or recent notifications. The fix ensures a smooth, predictable browsing experience.

How to Navigate:

- Go to **Dashboard → Notifications**.
 - Browse through notification page.
 - Open **Notification List page** and paginate through entries
-

Summary of Benefits

- **Consistent Risk Filtering** — Filters now work reliably across both paging and scrolling in the Risk List.
- **Unified Notification Pagination** — Notifications display consistently across the Dashboard and Notifications page.
- **Smoother Navigation** — Users can browse risks and notifications without mismatched data or missing entries.
